Brunata FuturaComfort⁺

Congratulations on your new
Brunata FuturaComfort⁺

Easy-to-read display

The comfort meter is easy to read. The following information alternates on the display in °C with one decimal:

Display reading 1
Shows the current temperature from the latest measuring

Display reading 2
Shows the average temperature during the current 24 hours

Display reading 3
Shows the average temperature during the previous 24 hours

Display reading 4
Shows the average temperature during the current fortnight

Display reading 5
Shows the average temperature during the previous fortnight

Meter number
Each meter has its own unique number. This enables us to find information about temperature conditions in a given installation location, etc. at any time

---

FuturaComfort⁺ is part of a new generation of Brunata meters, where design and advanced technology form a synthesis.

FuturaComfort⁺ is an important element in Brunata WebMon PTD – an Internet-based remote reading system for accurate measuring and presentation of the energy consumption in buildings.

However, Futura Comfort+ can also be used on its own, for it measures the temperature round the clock and also calculates average temperatures for selected periods of time.

Install Brunata Comfort+ on a suitable wall in a room where you wish to monitor the temperature development.

Read more about Futura Comfort+ and WebMon PTD at www.brunata.com
